Numpy Indexing and Selection

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

In [0]:

```
mat = np.arange(1,26).reshape(5,5)
mat
```

Out[38]:

```
array([[ 1,  2,  3,  4,  5],
       [ 6,  7,  8,  9, 10],
       [11, 12, 13, 14, 15],
       [16, 17, 18, 19, 20],
       [21, 22, 23, 24, 25]])
```

In [0]:

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

In [0]:

```
mat=mat[2:,1:]
mat
```

Out[40]:

```
array([[12, 13, 14, 15],
       [17, 18, 19, 20],
       [22, 23, 24, 25]])
```

In [0]:

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

In [0]:

```
mat[1][-1] #here it is slicing the modified matrix from the above output
```

Out[41]:

```
20
```

In [0]:

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

In [0]:

```
mat = np.arange(1,26).reshape(5,5)
mat=mat[0:3,1].reshape(3,1)
mat
```

Out[42]:

```
array([[ 2],
       [ 7],
       [12]])
```

In [0]:

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

In [0]:

```
mat = np.arange(1,26).reshape(5,5)
mat[-1]
```

Out[46]:

```
array([21, 22, 23, 24, 25])
```

In [0]:

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

In [0]:

```
mat = np.arange(1,26).reshape(5,5)
mat[3:]
```

Out[49]:

```
array([[16, 17, 18, 19, 20],
       [21, 22, 23, 24, 25]])
```

Now do the following

Get the sum of all the values in mat

In [0]:

```
mat = np.arange(1,26).reshape(5,5)
print(np.sum(mat))
```

Out[50]:

```
325
```

Get the standard deviation of the values in mat

In [0]:

```
mat = np.arange(1,26).reshape(5,5)
print(np.std(mat))
```

Out[51]:

```
7.2111025509279782
```

Get the sum of all the columns in mat

In [0]:

```
mat = np.arange(1,26).reshape(5,5)
print(np.sum(mat,0))
```

Out[53]:

```
array([55, 60, 65, 70, 75])
```
